1 2×2 Rubik's Cube

Please solve the 2×2 Rubik's Cube by using FF planner. Here are 4 cases for you to verify the correctness of your programs (`pddl` files). You should hand in 5 files, including a domain file (`cube_domain.pddl`) and 4 data files (`cube1.pddl`,`cube2.pddl`,`cube3.pddl`,`cube4.pddl`). For more information about 2×2 Rubik's Cube, such as actions R, U and F, please refer to `https://rubiks-cube-solver.com/2x2/`.

2.3 Calculation

Please implement the VE algorithm (C++ or Python) to calculate the following probability value:

p1 = P(Mortality='True' ∧ CTScanResult='Ischemic Stroke' | PatientAge='31-65')

p2 = P(Disability='Moderate' ∧ CTScanResult='Hemmorraghic Stroke' | PatientAge='65+' ∧ MRIScanResult='Hemmorraghic Stroke')

p3 = P(StrokeType='Hemmorraghic Stroke' | PatientAge='65+' ∧ CTScanResult='Hemmorraghic Stroke' ∧ MRIScanResult='Ischemic Stroke')

p4 = P(Anticoagulants='Used' | PatientAge='31-65')

p5 = P(Disability='Negligible')

3 Notes

1. For task1, I will grade your codes in correctness of 4cases, the number of steps, and time cost.
2. For task2, I will grade your codes in VE implementation, correctness of 5 cases and algorithm efficiency.
3. Please send **P03_YourNumber.zip** which should contain the codes and results of the above two problems to the mailbox (**ai_201901@foxmail.com**) before the deadline (**2019/11/27 23:59**).
4. Last but not least, you are not alone! If you find yourself stuck on something, contact the TA for help.
